The maMoS-100 is a high quality stationary monitor for continuous measurement of one gas component. It is produced using all the newest technological developments. The monitor comes complete with filter, Peltier dryer and condensate pump.

It can be fitted with either infrared or electrochemical sensors or both. The possible sensors are: (electrochemical) O₂, CO, NO, NO₂, SO₂, H₂S or: (IR) CO, CO₂, CH₄, N₂O.

The gas monitor is fitted with analogue outputs for current and voltage to allow control functions as well as measurement. There is also a digital data output if needed. The instrument operates fully automatically in one of two standard cycles:

- ◆ continuous
- ◆ measurement according to set timetable

Both cycles are freely programmable
